

Turn the reports you already export into decisions you can use.

Five local AI skills turn common insurance-agency reports into a clean owner dashboard, a printable briefing, a formatted working list, and clear next actions.

The skills work inside your **MY BIZ BRAIN** project in Codex or Claude/Cowork. Your source reports stay on your computer.

The pack does not upload reports, contact customers, change policies, or update carrier systems.

What is included.

01	Agency Quote Conversion	Measures quote-to-bind performance and identifies unbound follow-up opportunities.
02	Agency Retention Rescue	Organizes termination records into payment-rescue, price-conversation, likely non-saveable, and owner-review queues.
03	Agency Commission Audit	Reconciles commission totals and identifies policy rows that deserve human review.
04	Agency Owner Review	Turns business metrics and optional new-business reports into a decision-oriented operating brief.
05	Agency Cross-Sell	Identifies provisional monoline, add-item, and bundle opportunities that require household verification.

[START HERE](#)

One report is enough.

You do not need to collect all five types of reports before using the pack. Each skill works independently with the compatible report or reports supplied for that analysis.

Upload only a **termination audit** and request Agency Retention Rescue. The skill creates a retention dashboard and working queue based only on that audit.

Upload one **commission report** and request Agency Commission Audit. Additional compatible commission reports are optional.

Upload a compatible **policy or new-business report** and request Agency Cross-Sell. The result is provisional until candidates are verified against complete in-force household data.

Upload only a **quote-detail report** and request Agency Quote Conversion. The dashboard is built only from that report.

Upload a **Business Metrics report** and request Agency Owner Review. A matching New Business Details report adds production detail but is not required.

The skills do not wait for unrelated report types, and they do not combine unrelated audits into one calculation. Multiple files are combined only when they are compatible and intentionally provided for the same analysis.

What every completed analysis creates.

The analyzer accepts `.xlsx`, `.csv`, and `.tsv` exports. By default it creates a `standard-analysis-runs` folder beside the source report, not inside `MY BIZ BRAIN`.

PRIMARY RESULT `OWNER-REPORT.html`

A clean, self-contained Standard Playbook dashboard with KPI cards, visual breakdowns, important findings, limitations, and next actions. It opens in a modern browser and does not require a website or internet connection.

`OWNER-REPORT.pdf`

A printable, shareable owner briefing containing the aggregate operating picture.

`ACTION-LIST.xlsx`

A formatted Excel working file with a dashboard sheet, a filterable action-list sheet, frozen headers, useful number formats, and priority styling.

`summary.json`

The calculated totals, rates, comparisons, and guardrails used to support the report.

`action-list.csv`

The local review, exception, or follow-up queue in a simple flat-file format.

`run-manifest.json`

The source filenames, file hashes, detected sheets, header rows, pack version, and output names for the run.

The HTML, PDF, and Excel files use Standard Playbook formatting without a logo: white paper, near-black type, squared editorial structure, and restrained blue accents.

Install the pack once.

1. Open `MY BIZ BRAIN` in Codex or Claude/Cowork.
2. Ask the app: **Read `INSTALL-STANDARD-SKILLS.md` and complete the installation for this platform.**
3. Wait for `SKILLS-INSTALLED.md` to appear.

How to run an analysis.

1. Export the relevant report from the carrier or agency system.
2. Leave the report where it already lives, such as Downloads, Documents, or a report folder. Do not copy raw report dumps into `MY BIZ BRAIN`.

4. Confirm the receipt says `5/5 skills passed`.
5. Leave `STANDARD-SKILLS` and `SKILLS-INSTALLED.md` in the folder.

The installer places the Codex skills in `.agents/skills` or the Claude skills in `.claude/skills`. You do not need to find, open, or edit those hidden folders.

3. Open `MY BIZ BRAIN` in Codex or Claude/Cowork.
4. Attach the report or point the app to its local file path.
5. Ask for the analysis you want. Use the skill name when you know it, or describe the outcome in ordinary language.
6. Open `OWNER-REPORT.html` first. Use `ACTION-LIST.xlsx` as the working file and `OWNER-REPORT.pdf` when you want a printable briefing.
7. Review the findings and action list before anyone acts on them.

Attaching a file does not automatically start an analysis. A short request tells the AI which outcome you want. You do not need a giant prompt; the installed skill supplies the workflow, calculations, output format, and safety rules.

01 Agency Quote Conversion.

Quote-to-bind performance and unbound follow-up.

USE IT FOR

- Quote-to-bind conversion.
- Producer and product conversion comparisons.
- Unbound quote follow-up planning.
- Identifying high-volume opportunities that may need attention.

BEST INPUT

A Quotes Detail or Quotes Detail and Conversion Rate export containing production date, producer, product, quoted premium, and, when available, issued policy number.

WHAT YOU RECEIVE

- Serious, bound, and unbound quote counts when the report contains a usable bound signal.
- Overall conversion rate.
- Producer and product scorecards.
- Total and unbound quoted premium.
- A prioritized local unbound-quote working list.
- Data-quality warnings and disclosed limitations.

STARTER REQUEST

Analyze this quote-detail report with Agency Quote Conversion. Create the owner dashboard, reconcile the totals, show conversion by producer and product, and give me the top 20 unbound quotes to review. Do not send anything.

IMPORTANT LIMITATION

Quoted premium represents opportunity volume. It is not agency revenue, expected commission, or a promise that a quote can still be sold. Overall quote counts use unique Quote Control Numbers so a multi-product quote is not falsely counted as multiple quotes. If the export does not contain a usable issued-policy or equivalent bound field, the skill reports quote volume but does not invent conversion, unbound results, or a follow-up queue.

02 Agency Retention Rescue.

Termination records, sorted into queues you can work.

USE IT FOR

- Cancellation and termination review.
- Non-pay rescue planning.
- Renewal price-conversation queues.

WHAT YOU RECEIVE

- Termination count and premium totals.
- Cancellation categories and top reasons.
- Line-of-business mix.

- Identifying contactable customers before a termination date.
- Understanding cancellation reasons and premium represented in the audit.
- Contactability counts.
- A prioritized local retention working queue.

BEST INPUT

A BOB Termination Audit or similar cancellation export containing policy number, termination reason, effective date, premium, phone, and email.

STARTER REQUEST

Run Agency Retention Rescue on this termination report. Create the owner dashboard, separate payment rescues, price conversations, likely non-saveable cases, and owner-review cases, and give me the highest-priority review queue. Do not contact anyone.

IMPORTANT LIMITATION

The action list is triage, not permission to contact anyone or a promise that a policy can be reinstated. Price classifications require explicit words or phrases such as price, pricing, rate, rates, premium increase, or dissatisfaction with premium. Unrelated words containing the same letters are not treated as price signals. Carrier rules and licensed staff control coverage and reinstatement decisions.

03 Agency Commission Audit.

Reconcile the month. Flag the rows that need an answer.

USE IT FOR

- Monthly commission reconciliation.
- Negative commission and chargeback review.
- Variable compensation analysis.
- Identifying nonzero premium with zero commission.
- Finding unusual effective commission-rate rows that need explanation.

WHAT YOU RECEIVE

- Written and commissionable premium totals.
- Base, variable, and total commission totals.
- Effective commission rate.
- Product and bundle-type rollups.
- A local exception list with the reason each row was flagged.

BEST INPUT

One or more Policy Level Commission Summary exports covering the same agency or entity and compatible reporting periods.

STARTER REQUEST

Audit this commission report with Agency Commission Audit. Create the owner dashboard, reconcile the totals, identify negative commission, zero-commission premium, and unusual rate rows, and explain what I should verify. Do not call anything an underpayment without the carrier schedule.

IMPORTANT LIMITATION

An exception is not proof that the carrier paid incorrectly. A real expected-versus-paid calculation requires the applicable carrier commission schedule, reporting period, agent type, adjustment rules, and chargeback provisions.

04 Agency Owner Review.

The operating brief you take into the review meeting.

USE IT FOR

- Monthly or quarterly operating reviews.
- Book and policy growth.
- Retention and tenure-retention trends.
- Written premium pacing.

WHAT YOU RECEIVE

- An ordered business-metric record by section.
- Current, prior-year, PYE, YTD, 12-month, and 24-month values when supplied.

- Loss-ratio review.
- New-business product and producer contribution.

BEST INPUT

A Business Metrics Printable View. Add a matching New Business Details export when available for more production detail.

- New-business policy, item, and premium totals when New Business Details is supplied.
- Product and producer contribution when supplied.
- A concise operating briefing grounded only in the report or reports provided.

STARTER REQUEST

Build my Agency Owner Review from this business-metrics report. Create the owner dashboard and tell me what improved, what weakened, the three management questions I should ask, and the next three actions. Use the report's exact periods and do not invent goals.

IMPORTANT LIMITATION

The skill does not invent carrier benchmarks, agency goals, bonus thresholds, or acceptable loss-ratio targets. Supply those separately if you want performance measured against them.

05 Agency Cross-Sell.

Opportunity themes, verified before anyone reaches out.

USE IT FOR

- Provisional monoline review.
- Bundle and multiline opportunity themes.
- Add-item activity.
- Product-mix gaps.
- Preparing a household-verification queue.

WHAT YOU RECEIVE

- Bundle-type counts.
- Provisional monoline candidate count.
- New-business add-item activity when supplied.
- Product mix.
- A local household-verification queue.

BEST INPUT

A complete in-force customer and policy export is best. Policy-level commission and new-business exports can produce a preliminary review.

STARTER REQUEST

Run Agency Cross-Sell on this report. Create the owner dashboard, show bundle-type mix, add-item activity, and provisional monoline candidates. Do not create outreach until every household is verified against complete in-force data.

IMPORTANT LIMITATION

A monthly commission or new-business export is not a complete book of business. A monoline policy row does not prove that the household has only one policy across every carrier, account, or producer code. Verify every candidate against complete in-force household data before outreach.

If a report is not recognized.

The skill stops instead of guessing.

Ask the app to show which sheets and headers it found. Confirm that the export contains the fields listed for the intended skill. If the carrier changed its report format, provide a sanitized header list so the field mapping can be updated. Do not share customer names, policy numbers, phone numbers, email addresses, or other private data in the mapping request.

Safety rules for every skill.

- 01

Nothing sends to staff, clients, or prospects without the agency owner's explicit approval.
- 02

The skills never invent numbers. They use the supplied report or state that the information is unavailable.
- 03

The skills never change pricing, commission, compensation, accounting, or carrier-system data.
- 04

The skills never confirm coverage, quote a rate, promise reinstatement, or bind a policy.
- 05

Raw reports and customer-level action lists remain local.
- 06

Every output is a review aid for the agency owner or appropriately licensed team.
- 07

Source workbooks remain unchanged. Each run writes new files to its own output folder.

THE SHORTEST USEFUL REQUEST

Analyze this report with the appropriate Standard Agency Intelligence skill. Create the owner dashboard and local working list, explain the three most important findings, and do not send or change anything.

Install the skills once. Then use the reports you already export to see what deserves attention next.
